

## Image Sizes on Buying Guides, Articles/Blog and Home page

### List View Page Blog/Buying Guides

- Images on the list view page for buying guides/blog will be 300px wide and range in height: 150px min - 300px max.

### "Clicked" View Page Buying Guide only

- Images on this page will be placed below the title of the post and above the body copy.
- If 1 image is used it will be 620px width and a height at a max of 325px.
- If 2 images are used then each image will be 300px in width. BOTH these images need to be the same height and the height for both can range: 150px min – 325px max

### Home Page

- The featured image on the home page will be 620px width and a height max of 325px.
- "2 column" module images (see Featured Blog Post) will be 300px wide and range in height: 150px min - 300px max.
- "1 column" module images (see Featured Buying Guide) will be 300px wide and range in height: 150px min - 210px max.

\*Developers please note that the current home pages on basecamp have a home page feature image at 620px wide by 335px high. This has been adjusted to 620px wide by 325px high and abides to the above guidelines. This adjustment was made after a conversation with Iga and our standards team. We are trying to comply with Sears standards as best we can.

Thanks,

Michael O'Malley
